

CURRICULUM VITAE OF STUART GRASSIE

1 **Name** GRASSIE, Stuart Liddle

2 **Age** 65 years

3 **Date of birth** 2nd June 1954

4 **Place of birth** Kirkcaldy, Scotland

5 **Nationality** British

6 **Address** 79 River Lane
CAMBRIDGE
UK CB5 8HP

telephone +44 1223 522475

mobile +44 7803 290252

email stuart@stuartgrassie.com
stuart.grassie@railmeasurement.com

web www.railmeasurement.com

7 **Present position, areas of work and clients**

Self-employed engineering consultant

- expert witness
 - vehicle/track interaction, wheel and rail damage, wheel/rail interface
 - mechanical engineering and mechanics
- vehicle / track interaction and the wheel / rail interface
- rail and wheel damage
- reprofiling of rails
- development of rail corrugation measuring equipment
- development of software for rail monitoring and maintenance

Director, Stuart Grassie Engineering Ltd

Director, RailMeasurement Ltd

In my career as a consultant, I have worked on every continent (except Antarctica). Areas of interest and clients (2005-2019 unless stated otherwise) include the following.

Expert witness

- Holman Fenwick Willan LLP re. derailment of freight train, UK, 2013
- Cunningham Lindsey Intl., insurance loss adjustors re. derailment of “heavy haul” train, Brazil, 2007-2009
- Herbert Smith LLP re. derailment of a passenger train at Hatfield, UK (“National Express litigation”), 2002-2003

Vehicle/track interaction and the wheel/rail interface

- Bombardier Transportation
- CAF (re Line 12, Mexico City Metro; see, for example, <http://www.jornada.unam.mx/2015/01/29/capital/036n1cap> accessed 24 March 2016)
- Canadian National Railway
- Loram Maintenance of Way Inc
- Parsons Brinckerhoff Intl (for BART)
- Strathclyde Passenger Transport (Glasgow Underground)
- London Underground
- Wiener Linien GmbH (Vienna metro and tram system)
- SL Ban System, Stockholm

Rail grinding

- Brookfield Rail, Australia
- Sydney Trains, Australia
- Transport for NSW, Australia (“best practice” manual)
- Canadian National Railway
- Loram Maintenance of Way Inc
- Parsons Brinckerhoff Intl (for BART)
- Railtrack plc / Network Rail Ltd
- Schweerbau GmbH
- SL Ban System, Stockholm
- Sheffield Supertram (via Corus Rail Technologies)
- Strathclyde Passenger Transport / Glasgow Underground
- Wiener Linien GmbH (Vienna metro and tram system)

Monitoring and management of rail maintenance

- see Section 13

Rail corrugation, railway noise and vibration; dynamic behaviour of trackforms

- Mitsubishi Heavy Industries (for KVMRT, Malaysia)
- Jacobs Rail (for KVMRT, Malaysia)
- CAF (re Line 12, Mexico City Metro; see, for example, <http://www.jornada.unam.mx/2015/01/29/capital/036n1cap> accessed 24 March 2016)
- CTCL, Taiwan (re TSL, Singapore)
- Parsons Brinckerhoff Intl (for BART)
- Loram Maintenance of Way Inc (for Sound Transit, Seattle)
- London Underground
- Hong Kong MTRC, “checking engineer” for noise, vibration and dynamic behaviour of trackforms, bridges and viaducts, Lantau and Airport Railway (1991-97)
- NRC, Canada

Wheel and rail profile development

- Sydney Trains, Australia
- Canadian National Railway
- Railtrack plc (“ATH” profile: this has been ground since 2001 as the primary treatment of RCF on the UK main-line network and is in large part responsible for a reduction in plain-line, non-weld or joint related rail breaks from > 900p.a. before 2000 to < 150p.a. in 2011.)
- Banverket (profile to alleviate RCF on “Malmabanan” railway, adopted 1997)
- Department of Infrastructure, Victoria, Australia (Regional Fast Rail Project; rail profile RFR101 adopted 2004)
- Wiener Linien GmbH (Vienna metro and tram system; rail profiles used for asymmetric grinding in curves to alleviate corrugation and for alleviation of hunting in straight track)
- SL Ban System, Stockholm (asymmetric profiles to alleviate corrugation and RCF in curves)
- Schweerbau GmbH, profile to alleviate hunting on Docklands Light Railway, London

Rail inspection, selection and damage

- ArcelorMittal, Spain
- Brookfield Rail, Australia
- Canadian National Railway
- Bombardier Transportation, Germany
- London Underground
- Gautrain (for Bombardier Transportation and Corus Rail Technologies)
- Wiener Linien GmbH (Vienna metro and tram system)
- Railtrack plc / Network Rail Ltd (including International Peer Review of “NR RCF hypothesis”, 2003)
- Sydney Trains, Australia
- SBB, Switzerland

- Sheffield Supertram (via Corus Rail Technologies)
- Transit Cooperative Research Program (TCRP), USA, project D-1 1993 (“Rail corrugation mitigation in transit”), joint principal investigator (with JA Elkins of AAR), 1994-1996 (see refs [51] and [53], Section 13), undertaken with TTCl, USA

The proposals from this TCRP project (ref [53]) are the basis of a European “Brite Euram” research project, in which neither Dr Grassie nor TTCl was involved, for which funding of approximately €5 million was obtained.

Development and supply of equipment to measure rail corrugation and rail “roughness”

- see Section 12

Education and training

- International Heavy Haul Association (in collaboration with Indian Railways and the World Bank), Vehicle / Track Design, Maintenance, and Inspection Issues Workshop, New Delhi, India, 1-3 February 2013, contribution on rolling contact fatigue
- SouthWest Jiaotong University, Chengdu, China, invited lecturer, 2010 (rolling contact fatigue; bogie dynamics, curving and wheel/rail forces; corrugation and acoustic roughness)
- Voest Alpine: invited lecture, University of Leoben, 2008
- Originator, coordinator and principal contributor to annual Vehicle / Track Interaction Course. The Course was addressed regularly by colleagues of Dr Grassie from Europe and North America. The Course attracted up to 120 participants in the period 1999-2006
- Schweerbau GmbH: lead contributor to “Effective Rail Management” seminars, 2005-2009; contributor 2015
- Railway Accident Investigation Branch (RAIB): training courses on vehicle/track interaction for RAIB Inspectors

Standardisation

- British Standards Institution (BSI) expert on ISO TC108\SC2\WG8 ISO 14837, drafting an International Standard on ground-borne noise and vibration (2017 to present)
- BSI expert on CEN working group on track maintenance; author of the initial draft of European Standard for reprofiling rails, EN 13231-3:2006 (1997 to 2017)
- Contributor to the working group established to “road test” protocol proposed for rail roughness measurement in EN 15610:2009 (“Rail roughness measurement related to rolling noise generation”)
- Contributions to Australian Standards on rolling stock (2007 and 2011) and concrete sleepers (1987-88)

Review and evaluation of railway research and development

- European Commission, Research Directorate-General, 2004-2005
- Railway Safety and Standards Board (RSSB), UK: expert to assist with 2004-2005 research review exercise in area of vehicle/track interaction

In addition to the above paid work, I have been the Guest Editor or joint Guest Editor on five occasions (1990, 2006, 2009, 2012 and 2015) of the Proceedings of the conferences on Contact Mechanics and Wear of Rail/Wheel Systems. I instituted publication of these proceedings as a Special Edition of the journal *Wear* in 1990. I regularly review academic papers (Institution of Mechanical Engineers, *Journal of Sound and Vibration*, *Wear* and others), and occasionally review proposals for funding from national research councils. I contribute to academic and professional journals (peer-reviewed and otherwise) and international conferences. In 1984, at the invitation of Prof KL Johnson FRS, I reviewed the entire text of his standard reference work, "Contact Mechanics", Cambridge University Press, 1985 (1st edition).

I have also undertaken oral examinations of doctoral and MPhil candidates at Cambridge University, UK and of doctoral candidates at Chalmers University of Technology, Sweden, ULB, Brussels and Sheffield University, UK.

8 Postdoctoral employment

- Director and joint founder, RailMeasurement Ltd 2005 to present
- self-employed engineering consultant 1988 to present
- Technical Manager, Loram Rail Ltd 1994-98
- Lecturer in mechanical engineering, Imperial College, London 1990-94
- Research and development engineer, Pandrol International Ltd, London 1984-87
- Research assistant, Cambridge University Engineering Department (collaborative research project with British Rail Research) 1980-84

9 Invited lectures, distinctions, prizes, scholarships

- appreciation of Prof KL Johnson, 11th International Conference on Contact Mechanics and Wear of Rail / Wheel Systems, Delft 2018
- Contributor to Chapter 5 of "Guidelines to best practices for Heavy Haul railway operations: management of the wheel and rail interface", published by the International Heavy Haul Association, ISBN 978-0-911382-63-1 2015
- Alfred Rosling Bennett/Charles Lake Award, awarded by the Railway Division of the Institution of Mechanical Engineers for the best paper published or presented by the Institution on a railway topic (joint with DI Fletcher, AE Gallardo-Hernandez and P Summers, reference [87] in Section 14). 2013
- India Rail / IHHA Track and Rail / Wheel Interaction Workshop, New Delhi, India: rolling contact fatigue of rails and wheels: 2013
- Opening presentation, 9th International Conference on Contact Mechanics and Wear of Rail / Wheel Systems, Chengdu, China 2012

curriculum vitae of Stuart Grassie

- Chairman of the International Committee of the society that organises the conferences on Contact Mechanics and Wear of Rail/Wheel Systems 2012 to 2018
- invited lecture, interdisciplinary patents workshop on “What is an invention?”, Centre for Intellectual Property and Information Law, Cambridge University, UK 2010
- lead presentation at workshop on rail corrugation organised by Prof SD Iwnicki, Manchester Metropolitan University 2010
- invited presentation on vehicle/track interaction on metro systems; appreciation of Prof Joost Kalker, 7th International Conference on Contact Mechanics and Wear of Rail / Wheel Systems, Brisbane 2006
- invited presentation on problems of vehicle / track interaction on metro systems organised by Bombardier Transportation, Qingdao, China 2005
- invited paper, 6th International Conference on Contact Mechanics and Wear of Rail / Wheel Systems, Goteborg (reference [66], Section 14) 2003
- co-author of invited “lead” paper on rolling contact fatigue for special issue of journal FFEMS on “Wheel/rail safety” (ref [64]) 2003
- Member of the International Review Panel for “Guidelines to best practices for Heavy Haul railway operations: wheel and rail interface issues”, published by the International Heavy Haul Association (only UK member of this Panel, and one of three in Western Europe) 2001
- One of 4 members of the Advisory Committee for the series of international conferences on Contact Mechanics and Wear of Rail/Wheel Systems 1990 – 2009
- member of the International Committee for the conferences on Contact Mechanics and Wear of Rail/Wheel Systems 1990 to present
- Invited “state-of-the-art” paper (with Prof Klaus Knothe, TU Berlin), 13th IAVSD Symposium on the Dynamics of Vehicles on Roads and Tracks (reference [32] in Section 14). This also won the “Best Paper” prize at the 13th IAVSD Symposium. 1993
- Alfred Rosling Bennett/Charles Lake Award, awarded by the Railway Division of the Institution of Mechanical Engineers for the best paper published or presented by the Institution on a railway topic (joint with Dr Joe Kalousek, reference [33] in Section 14). 1993
- George Stephenson Prize, awarded by the Institution of Mechanical Engineers (joint with Dr Joe Kalousek, reference [33] in Section 14). 1993
- Research Fellow, Gonville and Caius College, Cambridge 1980-84
- Senior Rouse Ball Research Studentship, Trinity College, Cambridge 1979-80
- Junior Research Studentship, Trinity College, Cambridge 1976-79
- Captain James Cook Travelling Scholarship, University of Queensland 1976-79
- Commonwealth of Australia postgraduate award 1975
- A J Dowrie Memorial Prize, University of Queensland 1973
- Queensland Government Open Scholarship 1971-74

10 Academic qualifications

- PhD, Cambridge ("The Corrugation of Railway Track") 1980
- MEngSc, Queensland ("Solar Operated Absorption Air Conditioning") 1976
- BE with First Class Honours in Mechanical Engineering, Queensland 1975

11 Membership of professional bodies etc.

- Member - Standing Committee on Transportation-Related Noise and Vibration - ADC40, Transportation Research Board, USA 2011 to present
- Chartered Engineer, Member of the Institution of Mechanical Engineers 1988
- Fellow of IMechE 2018
- Member of the Permanent Way Institution 1988
- Fellow of PWI 2018

12 Technology (www.railmeasurement.com)

The equipment and software below are joint developments with Dr Martin Saxon (also of Railmeasurement Ltd). The wheel measuring equipment (TriTops) is a joint development with ISVR, University of Southampton.

- *Equipment to measure rail corrugation and acoustic rail roughness* 1987 to present

The CAT (Corrugation Analysis Trolley) is now a standard piece of measuring equipment, used by railway administrations, consultants, universities and contractors worldwide, to measure rail corrugation and acoustic roughness to the requirements of EN 13231-3:2006, EN ISO 3095:2005 and EN 15610:2009. A further development, the bi-CAT, was finalised in 2015 to measure two rails simultaneously with a single operator.

The Rail Corrugation Analyser (RCA) is supplied for reprofiling trains and other track-mounted vehicles. It is used to measure to the requirements of EN 13231-3:2006 at speeds in the range 0.5-50km/h. The equipment is supplied by Loram as standard corrugation measuring equipment on their rail grinders, unless alternative equipment is specifically requested. An RCA was supplied in 2018 to Crossrail in London to monitor compliance of the longitudinal profile to the so-called IPD10 level. RCAs have also been supplied directly to Sumitomo Metal Technology Inc / Nippon Steel for use in Japan, to Schweerbau GmbH for use in Europe and to QR National / Aurizon Ltd in Australia.

The high speed rail corrugation measuring system (HSRCA) was supplied initially to Australian National (AN) in 1987 and was used by them for many years to schedule rail grinding and weld straightening on their network. These measurements are now being made using a hi-rail vehicle with a system that we supplied to measure corrugation to an accuracy of microns at 50km/h. The HSRCA has been proven in tests undertaken in 2009 with French railways (SNCF) to measure corrugation and acoustic roughness reliably at speeds of 90-160km/h (ref [82]).

- *TriTops* 2012
RailMeasurement have developed, in collaboration with ISVR at Southampton University, the TriTops equipment for measuring acoustic roughness and irregularities of wheels, out-of-round and diameter.

- *Rail analysis utility* 2010
The Rail Analysis Utility is software that processes transverse profile measurements from hardware (e.g. laser-based systems, supplied by others) and provides information such as rail wear, rail type and fit of railhead profile to a prescribed profile. These measurements are combined with measurements of corrugation (typically from the HSRCA) to give a summary “Grinding Compliance Index” (GCI) and “Rail Quality Index” (RQI), which can be used to plan rail maintenance and replacement. The software and HSRCA have been supplied for a measuring train developed by Serco Rail Technologies for Queensland National.
- *software to assist with management and monitoring of rail maintenance* 2006 to present
Software has been developed for Metronet and Nexus (Tyne and Wear Metro) to assist with management of rail maintenance.
- *software to assist in design of railway track to carry dynamic loads* 1987-1995
Software based on the models and proposals in refs [11,19 and 30] was supplied via Railways of Australia to Australian state railway administrations.

- 80 “Control of wheel/rail noise and ground-borne vibration: the role of rail maintenance”, Session 365, 89th TRB Annual Meeting, Washington DC, 10th-14th January 2010 (with RW Harris)
- 81 “Controlling irregularities in rail to reduce noise”, *International Railway Journal*, April 2010, 38-42
- 82 “Noise mapping’ of a railway network: validation and use of a system based on measurement of axlebox vibration”, *NNFM*, 118, 2011, 511-517 (Procs of IWRN10, Nagahama, Japan, 18-22 October 2010), (with E Bongini and M Saxon)
- 83 “Rail corrugation”, section 4.5 of handbook, “*Best practice in wheel-rail interface management for Mixed Traffic Railways*”, Felix Schmid et al (eds.), University of Birmingham Press, First Edition, September 2010
- 84 “Procs. Of 8th International conference on Contact Mechanics and Wear of Rail/Wheel Systems”, *Wear*, 271, 1-2, 2011 (joint Guest Editor with E Magel and P Mutton)
- 85 “‘Squats’ and ‘Studs’ in Rails: Similarities and Differences”, IHHA conference, Calgary, June 2011 (with DI Fletcher, AE Gallardo-Hernandez and P Summers)
- 86 “Squats and squat-type defects in rails: the understanding to date”, *Journal of Rail and Rapid Transit, Procs of I mech E*, 2012, 226F, 235-242 (Review Paper)
- 87 “‘Studs’: a squat-type defect in rails”, *Journal of Rail and Rapid Transit, Procs of I mech E*, 2012, 226F, 243-256 (with DI Fletcher, AE Gallardo-Hernandez and P Summers)
- 88 “Telling the difference between studs and squats”, *Railway Gazette International*, August 2012, pp36-38 (with DI Fletcher)
- 89 “Rail irregularities, corrugation and acoustic roughness: characteristics, significance and effects of reprofiling on different types of railway system”, *Journal of Rail and Rapid Transit, Procs of I mech E*, 2012, 226F, 542-557
- 90 “Traction, curving and surface damage of rails, Part 2: rail damage”, *Procs of 9th Intl Conference on Contact Mechanics and Wear of Rail/Wheel Systems*, Chengdu, China, 27-30 August 2012, paper 1.1, pp1-8
- 91 “Rail irregularities: characteristics, significance and effects of reprofiling”, *Procs of 9th Intl Conference on Contact Mechanics and Wear of Rail/Wheel Systems*, Chengdu, China, 27-30 August 2012, paper 19.1, p402

¹ I was advised in March 2014 by JRRT that this “is one of the top five most cited articles in the last 5 years” for the journal.

- 92 Monitoring of corrugation growth on tracks with Cologne egg fastening system, The International Symposium on Speed-up, Safety and Service Technology for Railway and Maglev Systems (STECH'12), Seoul, Korea, September 17-19, 2012 (with Hengyu Wang, Yongquan Deng, Heji Zhang, Wenjian Wang, Zefeng Wen, Xuesong Jin)
- 93 "Defects, dynamics and contact mechanics", *Procs of 10th International Heavy Haul Association conference*, New Delhi, India, February 2013, pp363-369
- 94 Measurement of long wave irregularities on rails", in "Noise and vibration mitigation for rail transport systems", JCO Nielsen et al (eds), Notes on Numerical Fluid Mechanics and Multidisciplinary Design, 2015, vol 126, pp643-649 (also *Proceedings of 11th Intl Workshop on Railway Noise*, Uddevalla, Sweden, 9-13 September 2013)
- 95 "Procs. Of 9th International conference on Contact Mechanics and Wear of Rail/Wheel Systems", *Wear*, 314, 1-2, 2014 (joint Guest Editor with Weihua Zhang and Hengyu Wang)
- 96 "Traction, curving and surface damage of rails, Part 2: rail damage", JRRT, Procs of ImechE, 2015, 229F, 330-339 (Published online before print, 11 July 2014, doi: 10.1177/0954409714541648)
- 97 "Studs and squats: the evolving story", *Procs of 11th International Heavy Haul Association conference*, Perth, Australia, June 2015, pp1065-1070
- 98 "Studs and squats: the evolving story", *Wear*, vol 366-367, pp194-199, 2016 (also *Procs of 10th Intl Conference on Contact Mechanics and Wear of Rail/Wheel Systems*, Colorado Springs, USA, August 2015)
- 99 "Procs. Of 10th International conference on Contact Mechanics and Wear of Rail/Wheel Systems", *Wear*, vol 366–367, pp 1-424, 2016 (joint Guest Editor with Mats Berg, Anders Ekberg, Roger Lunden, Sebastian Stichel),
- 100 "Routine measurement of long wavelength irregularities from vehicle-based equipment", in "Noise and vibration mitigation for rail transport systems", David Anderson et al (eds), Notes on Numerical Fluid Mechanics and Multidisciplinary Design, 2018, vol 139, pp333-342 (also *Proceedings of 12th Intl Workshop on Railway Noise*, Terrigal, NSW, Australia, 13-15 September 2016)
- 101 "Studs and squats: a best practice approach", *Journal of the PWI*, vol 136, part 1, pp16-19, January 2018
- 102 "A practical methodology to prioritise reprofiling sites for corrugation removal", accepted for publication in JRRT, Procs of ImechE, 2020, also paper 167, *Procs of 11th Intl Conference on Contact Mechanics and Wear of Rail/Wheel Systems*, Delft, Netherlands, September 2018
